

How to Audit CIS-Hardened Ubuntu 20.04 System?

SeBAz is a tool to check your system's compliance with CIS Benchmarks. It automatically performs the tests and generates a CSV file for the auditor's review. It also generates an audit ready PDF document which contains information such as which tests passed (or) failed, and why so.

Look how easy it is to use:

```
- sudo ./SeBAz-amd64 --dist ubu -a myName -o myOrg -u myOrgSysId --level 2 --platform workstation --auditor Luc --verbose
```

Features

- Perform checks against CIS Benchmark recommendations
- Lists out all the recommendations
- Plug and Play
- Generate an audit ready report as to which controls passed or failed
- Spreadsheet with all the results, which can be modified after manually checking the systems
- Generate report(s) from the modified spreadsheets
- Logs of all the commands performed by the tool

Installation

Install SeBAz by running:

- wget <https://github.com/Deepak710/SeBAz/releases/download/v0.5.1/SeBAz-amd64>
- chmod +x SeBAz-amd64
- sudo ./SeBAz --dist <DIST> -a <NAME> -o <ORG> -u <SYS-ID>
- Options available in SeBAz: <https://github.com/Deepak710/SeBAz/wiki/Options-available-in-SeBAz>

Contribute
